btcproxyd configuration notes

Standard Ports for Bitcoin Core

Table 1. Standard Ports for Bitcoin Core

	MainNet	TestNet	RegTest
network-id	`org.bitcoin.production`	`org.bitcoin.test`	`org.bitcoin.regtest`
RPC	8332	18332	18443
P2P	8333	18333	18444
ZMQ (blocks)	28332	38332	38443
ZMQ (tx)	28333	38333	38444

NOTE	The standard ports for **RPC** and **P2P** are the defaults in Bitcoin Core. The standard ports for **ZMQ** are recommended by this project (and somewhat influenced by the Lightning Network Daemon installation instructions)

By using standard ports we achieve the following goals:

1. We can run MainNet, TestNet, and RegTest simultaneously on the same host.

2. We minimize the amount of reconfiguration of different tools, etc.
